

Ejercicio TEXT (FLET)

Crear un documento PDF indicando que **Propiedades** se usan en el control **Text**, y en la propiedad **TextSpan**, y di que hace cada una de ellas, en la siguiente aplicación (Nota: No hay que indicar dos veces la misma propiedad. Si ya has explicado lo que hace “size” no lo vuelvas a poner.):

```
import flet as ft

def main(page: ft.Page):
    page.add(
        ft.Text("Plain text with default style"),
        ft.Text("Selectable plain text with default style", selectable=True),
        ft.Text(
            "Some text",
            selectable=True,
            size=30,
            spans=[
                ft.TextSpan(
                    "here goes italic",
                    ft.TextStyle(italic=True, size=20, color=ft.Colors.GREEN),
                    spans=[
                        ft.TextSpan(
                            "bold and italic",
                            ft.TextStyle(weight=ft.FontWeight.BOLD),
                        ),
                        ft.TextSpan(
                            "just italic",
                            spans=[
                                ft.TextSpan("smaller italic", ft.TextStyle(size=15))
                            ],
                        ),
                    ],
                ),
            ],
        ),
        ft.Text(
            disabled=False,
            spans=[
